

BrewBot code ideas and concepts

(27 Sep 2024)

Coding ideas:

- separate function for movement of robot
- every menu option as separate function encapsulating robot movement
- updatrobot(qValues)

pseudo-code:

```
//state variables
boolean making_coffee;
boolean isRobotMoving;

while(user_input != close_program) {
  switch case (user_input)
  case 1
  latte()
  case 2
  espresso()
  case 3
  tea()
  case 4
  iced_coffee()

  default
  disp("Invalid selection")

  updateMilkmanMovement(qValues)
  updateEspressomanMovement(qValues)
  moveVertices(handler)
}
```

Environment ideas

- to add:
- tamp machine (maybe as part of coffee machine)
- customise coffee portafilter (add custom handle for robot)
